# Russell Boating Club – Drying Out Rules

## General

The boat Drying out facility is owned and operated by Russell Boating Club Inc. It is available for use by Club members only. Questions and inquiries should be made to our slip master, Barry Newland at: [slip@russellboatingclub.org.nz](mailto:slip@russellboatingclub.org.nz) or 021 0247 9779

1. Drying out alongside the clubhouse can interfere with the slipway operation so advanced bookings with the Slip Master are essential. To make a booking complete and sign the club Drying Out Registration Agreement and return to the Slipmaster. Bookings are limited to no more than 1 tide unless prior approval is given by the Slip Master. If for any reason a booking is canceled by the club, the boat owner will be advised by phone and/or email as soon as possible.
2. Only boats with a displacement of less than **10 metric tonnes** can Dry Out alongside the clubhouse or jetty.
3. To help fund this facility, please deposit \$20 in the club donation box on the wharf.

## Boat Owner Responsibilities

4. The boat owner must always comply with the club's Drying Out Rules. Failure to comply with these rules will result in the slip-master immediately ceasing all work on the boat until a satisfactory solution is found.
5. The boat owner agrees to indemnify the Club from all costs incurred by the Club directly resulting from a breach of these rules by anyone working on their boat whilst using the Drying Out facility.
6. The boat owner takes full responsibility for the boat and although all care will be taken by the club, the entire process is at the owner's risk. Neither the club nor any representative of the club is responsible, or liable for, any damage to the boat while using the facilities.
7. Work at the Drying Out facility shall be carried out in a safe and professional manner and in compliance with the Health and Safety at Work Act 2015. In particular the boat owner/crew will:
  - a. Take care in the Drying Out area to avoid slips, falls and trips.
  - b. Appropriate personal protective equipment must be worn when working on the boat. This includes appropriate footwear, ie, no jandals, 'croc's' or bare feet.
  - c. Report any injury or near miss to the slip-master. If treatment is required, the accident must be reported immediately.

## Boat Maintenance Rules

8. Using the Club facilities for boat maintenance activities must not result in any discharge to the coastal marine area. The following boat maintenance activities are **prohibited** in the Drying Out area:
  - a. The discharge of bilge material containing oil from boats, including from the flushing of oil contaminated bilges;
  - b. The cleaning of boat hulls including the removal of slimes and/or films. The removal of macro marine growths, being those that are not slimes and/or films from propellers, drive shafts, and sea chests using hand tools is permitted;
  - c. Sanding, painting and/or antifouling of boat hulls, propellers, drive shafts or rudders;
  - d. Use of water blasting equipment;

- e. All other boat maintenance activities. Any boat maintenance activity likely to involve a discharge of antifouling or other similar contaminants to the coastal marine area (for example painting of hulls) must take place on the slipway to ensure such discharges are appropriately managed;
  - f. The cleaning of hulls of boats that have arrived from Auckland or overseas and that have not been cleaned elsewhere in NZ prior to their arrival.
9. Drying Out facility users are responsible for ensuring the area remains clean. Macro marine growth that is removed shall be collected using drop cloths, bins or other similar devices placed directly under the hull being worked on and taken to the tip for disposal. Drop cloths are to be provided by the user.

## Contractors

10. It is the boat owners responsible to ensure that any contractors working on their boat understand and abide by these rules. The Club has absolute discretion to refuse access by tradespeople but will not unreasonably do so.
